

WILDFLOWERS OF SONOMA COUNTY

Nature is all around us — from our beautiful and protected parks to the trees that line our sidewalks. Slow down and you just might notice some spectacular nature right outside your door. This coloring book features some of California's common native flowers, all of which you can find right here in Sonoma County. If you're proud of your coloring pages, post a picture on Facebook, Instagram or Twitter and use the hashtag #NoticeNature for a chance to be featured on our page! Bonus points if you tag us. 😊

BUTTER AND EGGS

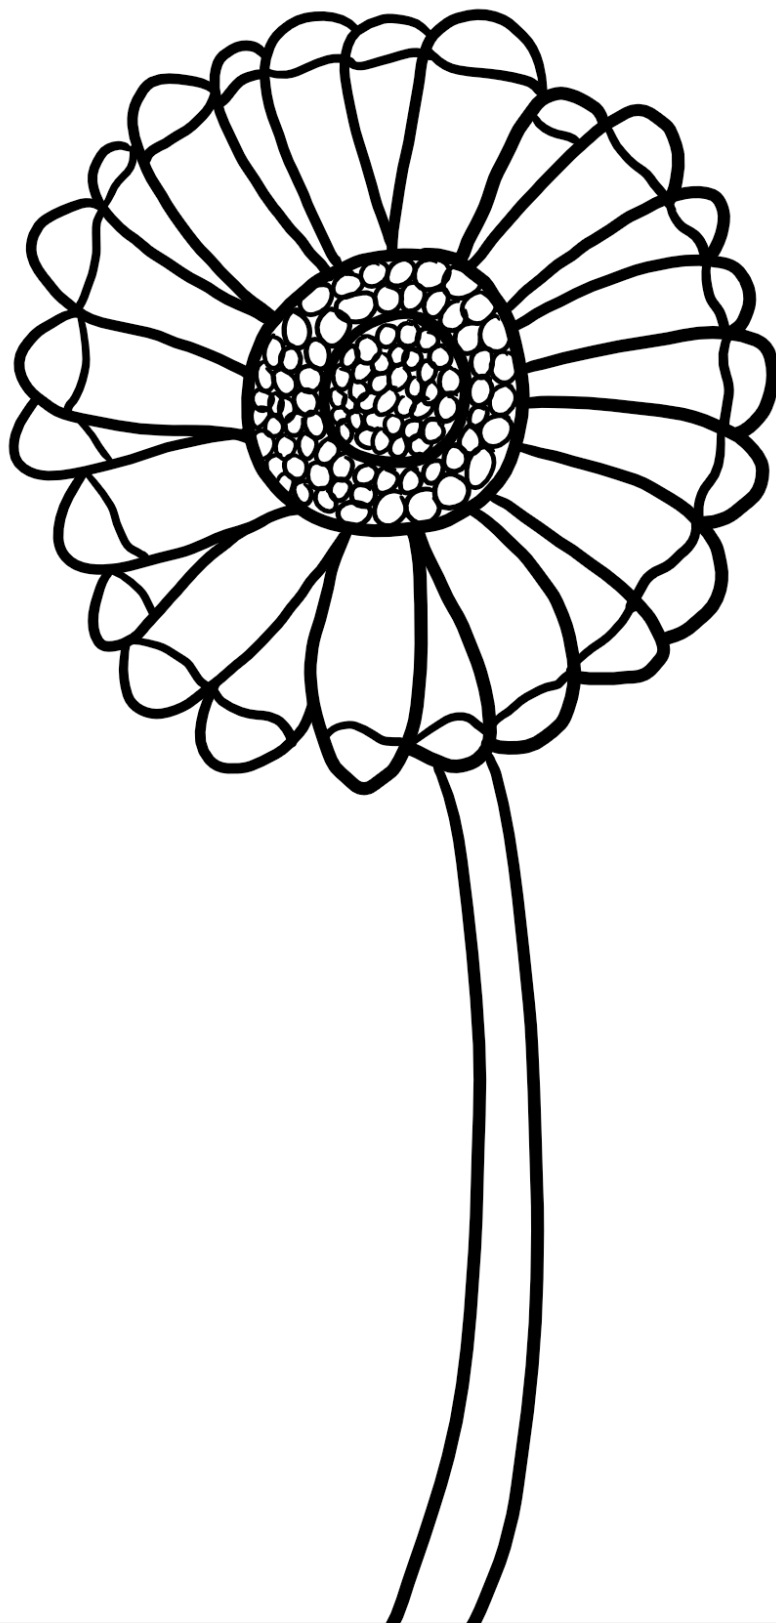

Scientific name: *Triphysaria eriantha*

Can you guess why this herb is named
Butter and Eggs?

If you guessed because it's white and
yellow, you got it! Along with three
white-and-yellow pouches that inspired
its name, it also has a hairy purple stem
and purple leaves.

TIDY TIPS

Scientific name: *Layia platyglossa*

This flower attracts many species, especially butterflies, and it's a very important source of food for the endangered Checkerspot butterfly.

BLUE-EYED GRASS

Scientific name: *Sisyrinchium bellum*

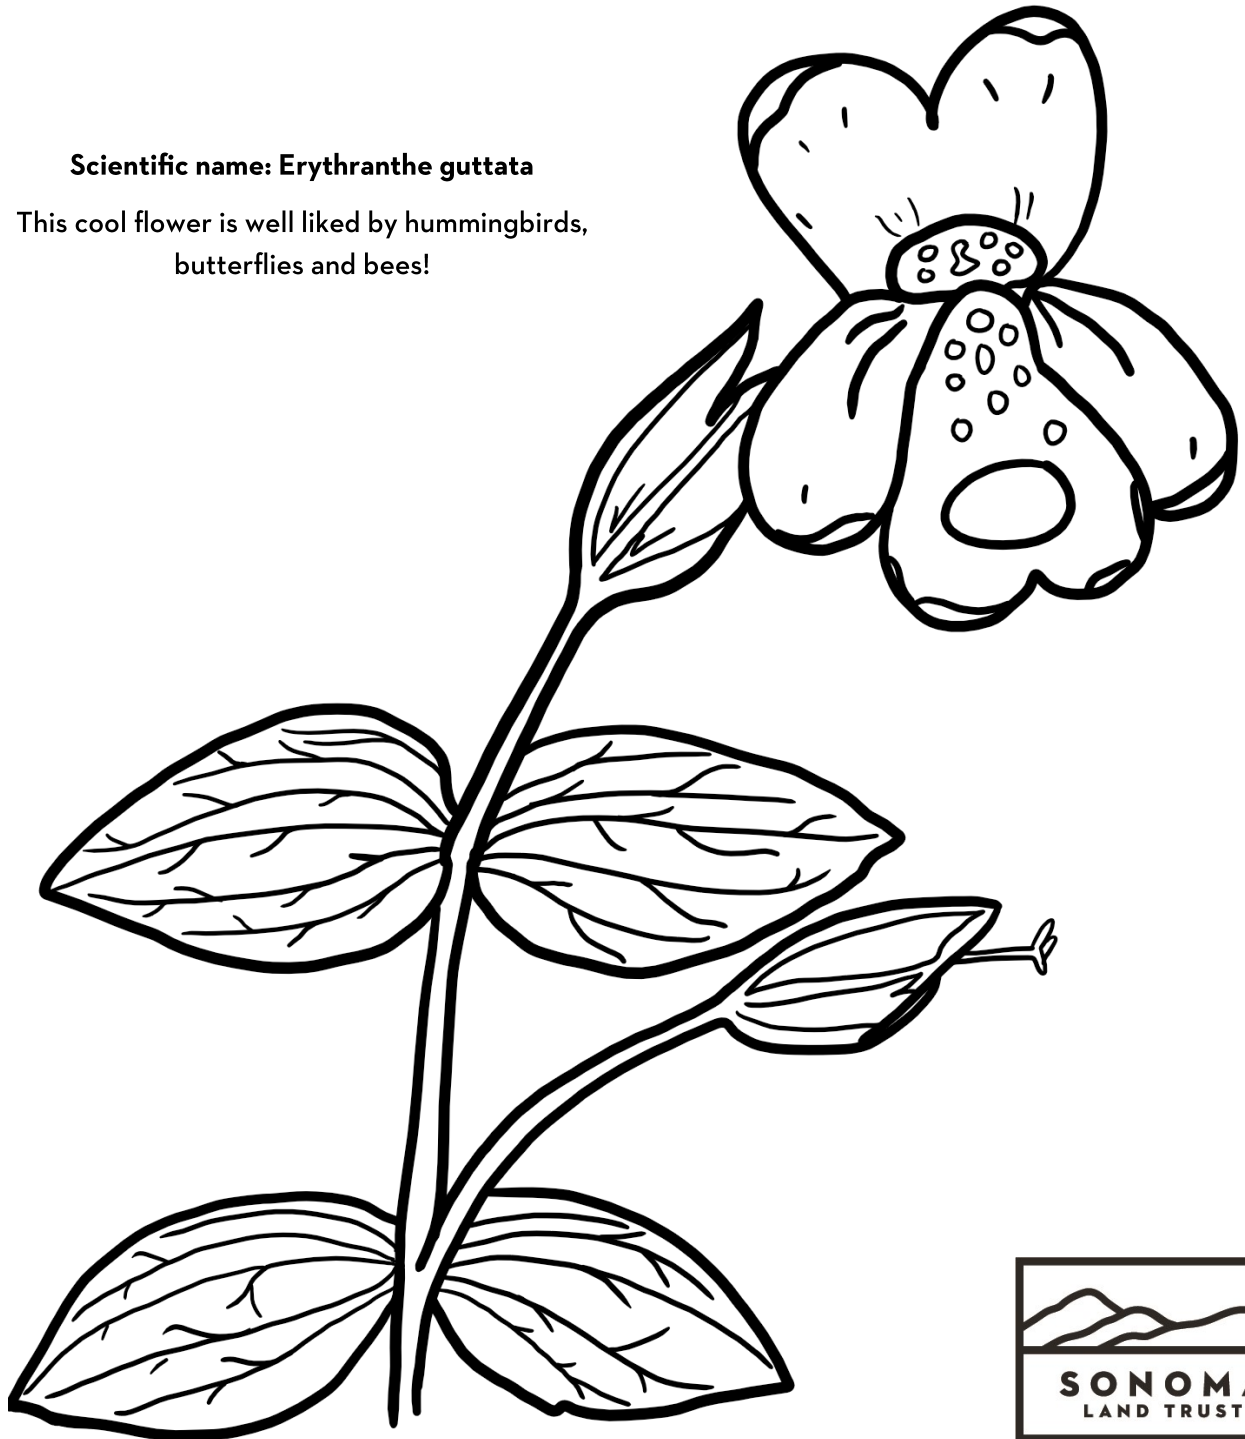

Six petals form the flower of this herb that
can grow up to 24 inches.

SEEP-SPRING MONKEY FLOWER

Scientific name: *Erythranthe guttata*

This cool flower is well liked by hummingbirds,
butterflies and bees!

CALIFORNIA WILD ROSE

Scientific name: *Rosa californica*

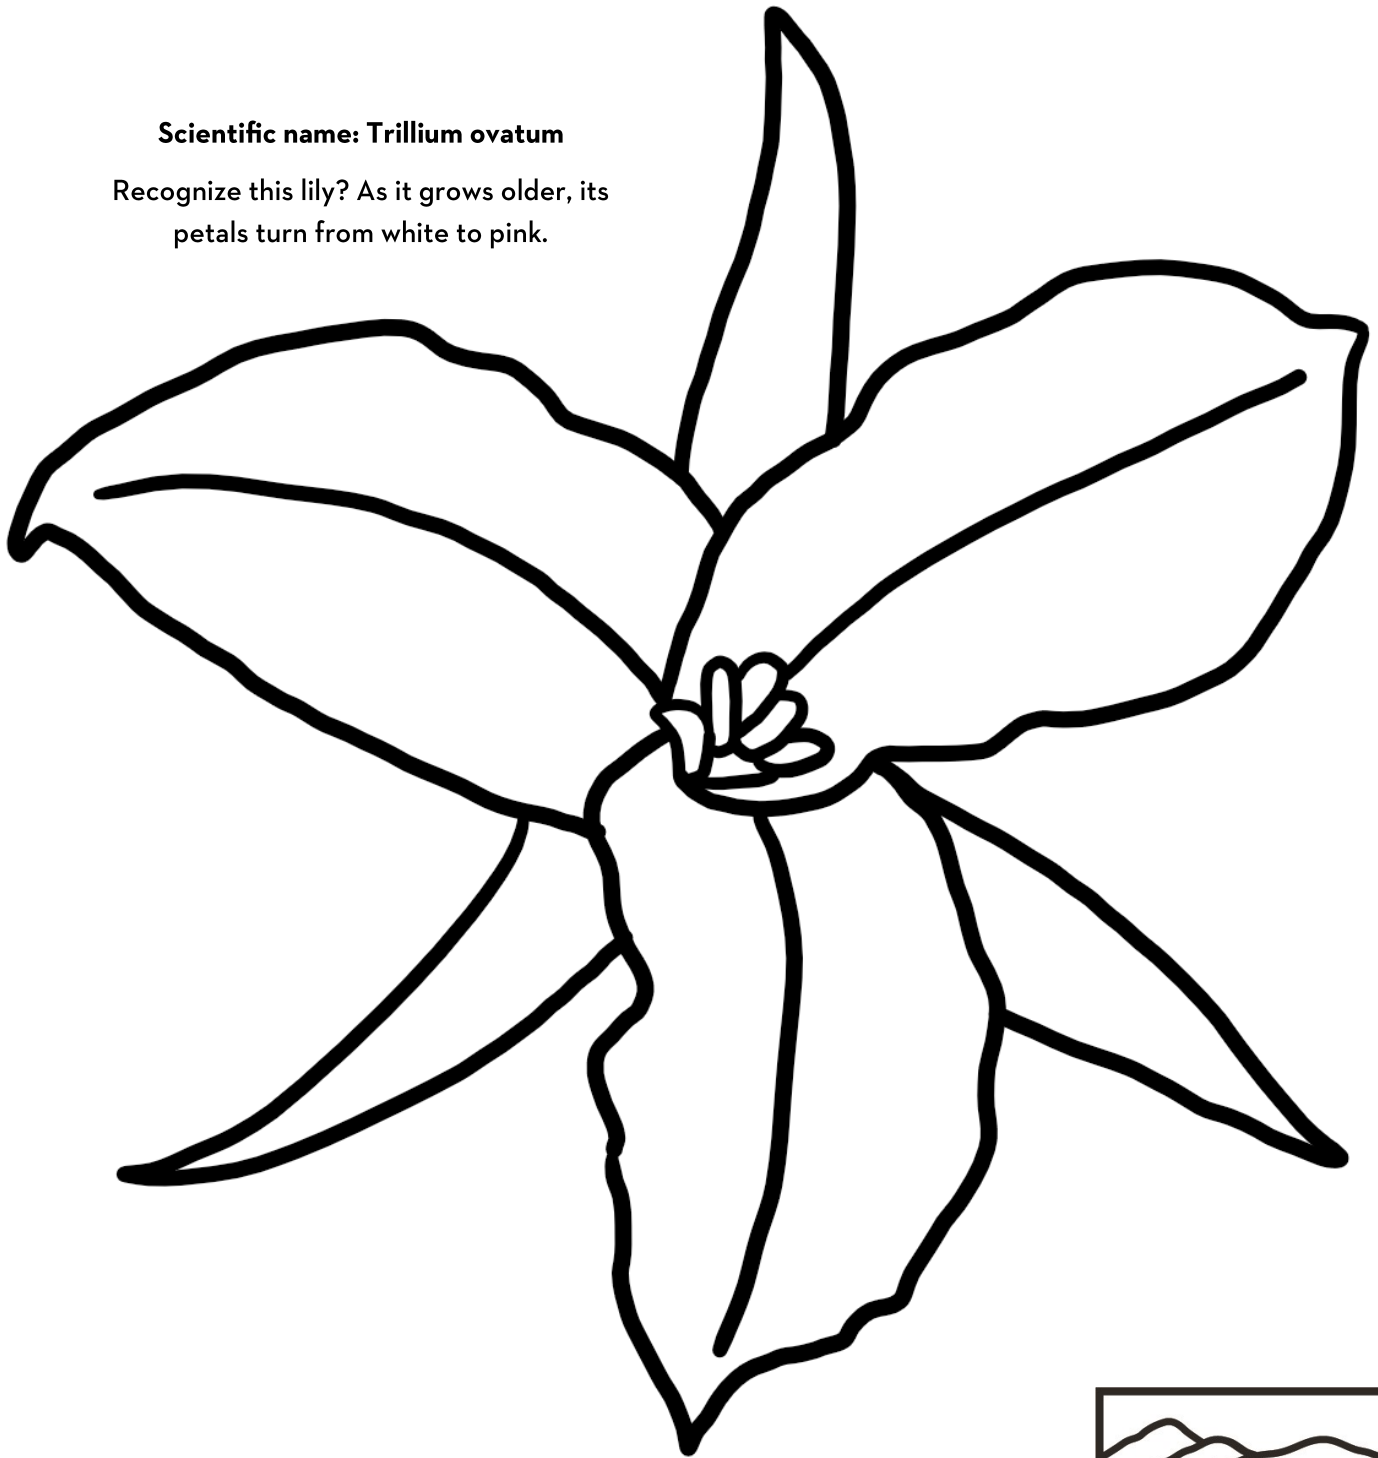

This is a common rose native to California. Indigenous Californians used part of this beautiful rose to make medicinal tea.

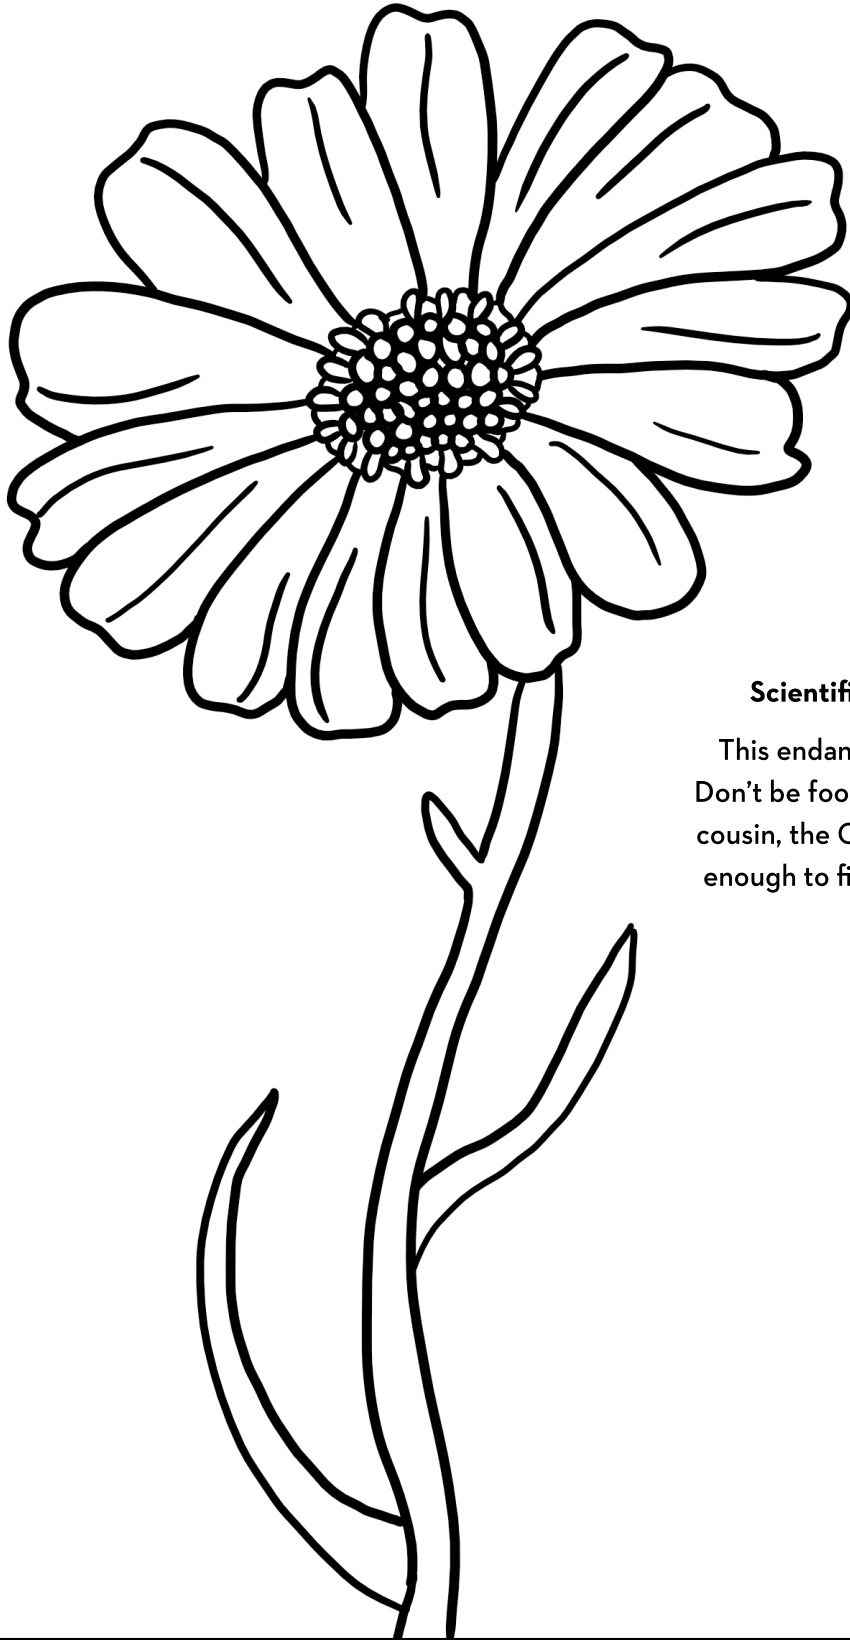

PACIFIC TRILLIUM

Scientific name: *Trillium ovatum*

Recognize this lily? As it grows older, its
petals turn from white to pink.

SONOMA SUNSHINE

Scientific name: *Blennosperma bakeri*

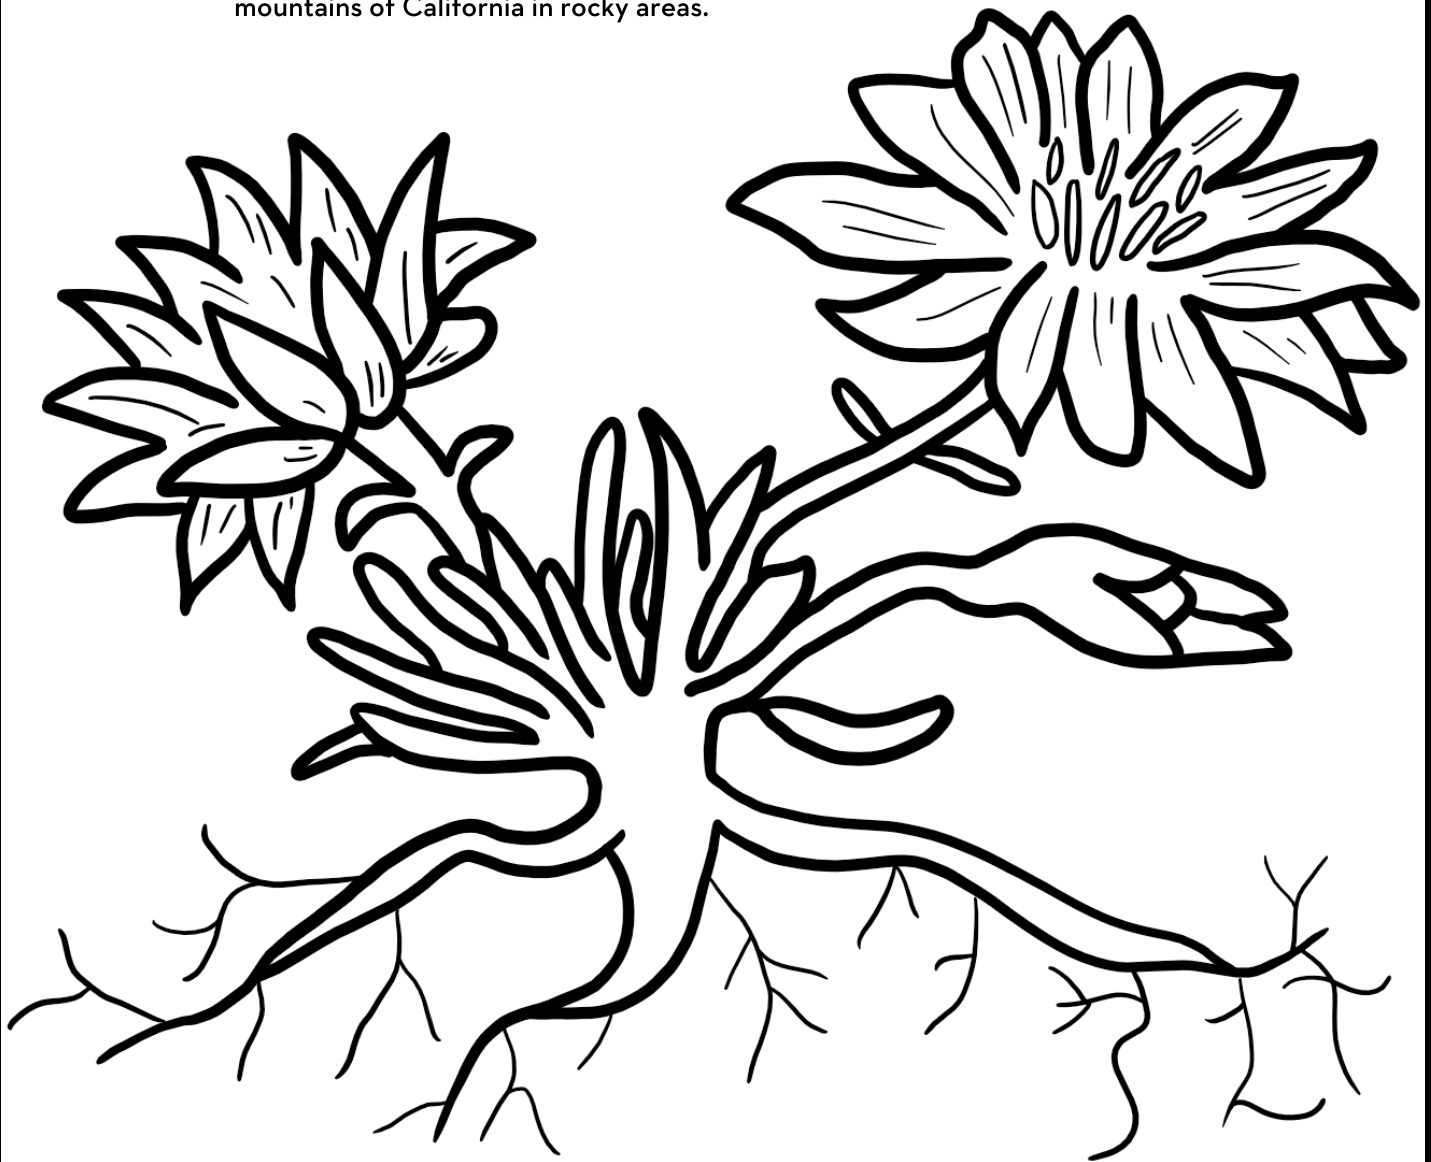

This endangered flower is very hard to find! Don't be fooled, it looks a lot like a daisy and its cousin, the Common Stickyseed. If you're lucky enough to find one, you can recognize it by its longer petals.

BITTER ROOT

Scientific name: *Lewisia redivivia*

This not-so-tasty plant can be found throughout the mountains of California in rocky areas.

Sonoma Land Trust protects the scenic, natural,
agricultural and open landscapes of Sonoma County
for the benefit of the community and future
generations.
